-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 03 January 2005.
- 2a) ☒ This action is **FINAL**.                      2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) ☒ Claim(s) 18-25,30 and 32 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 18-25,30 and 32 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 1/18/2002 (original) is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

### DETAILED ACTION

#### CONTINUED EXAMINATION UNDER 37 CFR 1.114 AFTER FINAL REJECTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission of RCE filed on January 3, 2005 have been entered. The claims pending in this application are claims 18-25, 30, and 32.

#### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 18-22, 25, and 32 are rejected under 35 U.S.C. 102(b) as being anticipated by Davis *et al.*, (US Patent No. 4,624, 835, published on November 25, 1986).

Davis *et al.*, teach microcentrifugation tube for the concentration of samples for electron microscope.

Regarding claim 18, since Figure 5 taught by Davis *et al.*, (see attached Figure 5 with the examiner's handwritings) teach a centrifuge tube 10 comprising an upper region, a middle region and a low region wherein an inner diameter of said upper region is larger than an inner diameter of said lower region, wherein said upper region is separated from said lower region by said

Art Unit: 1634

middle region having at least one portion with parallel inner sides and an overall decreasing diameter from said upper region toward said lower region and wherein said lower region has parallel inner sides and a closed bottom, claim 18 is anticipated by Davis *et al.*

Regarding claim 19, according to the dictionary, “serrate” means “notched or toothed” (see the attached dictionary in previous office action), since Davis *et al.*, teach that another alternative embodiment of the centrifuge tube 10, score 16, includes a notch (see Figures 1 and 2, lines 65-68 in column 3, and lines 1-3 in column 4), claim 19 is anticipated by Davis *et al.*

Regarding claims 20 and 25, the claims are drawn to the tubes of claim 18 wherein said lower region has an inner diameter small enough to trap an air bubble between two layers of liquid such that the air bubble will keep said two layers of liquid separate so long as said centrifuge tube is at rest as recited in claim 20 or wherein said tube is prepared from materials such that said tube can be centrifuged at velocities high enough to band viruses in CsCl gradients without said tube breaking as recited in claim 25. Claims 20 and 25 only recite two functions of the centrifuge tube recited in claim 18. It is known that a claim containing a “recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus” if the prior art apparatus teaches all the structural limitations of the claim. *Ex parte Masham*, 2 USPQ2d 1647 (Bd. Pat. App. & Inter. 1987) and while features of an apparatus may be recited either structurally or functionally, claims directed to an apparatus must be distinguished from the prior art in terms of structure rather than function. *In re Schreiber*, 128 F.3d 1473, 1477-78, 44 USPQ2d 1429, 1431-32 (Fed. Cir. 1997) (see MPEP 2114). Since Davis *et al.*, teach all structure limitations recited in claims 18, 20, and 25, claims 20 and 25 are anticipated by Davis *et al.*

Art Unit: 1634

Regarding claim 21, Davis *et al.*, teach that the width of the bases 36 and 38 of the trapezoidal horizontal cross-section in tip section 30 are approximately 0.25 millimeters and 0.12 millimeters respectively (see column 4, lines 42-51). As shown in Figures 3 and 4, the tip section 30 and the width of the base 38 of the trapezoidal horizontal cross-section in tip section 30 are located on the lower region of the centrifuge tube wherein the width of the base 38 of the trapezoidal horizontal cross-section in tip section 30 is one of inner diameters of said lower region of the centrifuge tube. Since the width of the base 38 of the trapezoidal horizontal cross-section in tip section 30 (ie., one of inner diameters of said lower region of the centrifuge tube) is 0.12 mm and it is known that 1 inch equals to 25 mm, one of inner diameter of said lower region of the centrifuge tube taught by Davis *et al.*, is 0.0048 inch (0.12/25), which is smaller than 0.25 inch as recited in claim 21.

Regarding claim 22, since Figure 5 with the examiner's handwritings shows that said lower region is at least 5% of the total length of said tube, claim 22 is anticipated by Davis *et al.*.

Regarding claim 32, since Figure 5 shows that the upper region of the centrifuge tube taught by Davis *et al.*, has an outer diameter larger than an outer diameter of the lower region of the centrifuge tube (see attached Figure 5 with the examiner's handwritings), claim 32 is anticipated by Davis *et al.*.

Therefore, Davis *et al.*, teach all limitations recited in claims 18-22, 25, and 32.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1634

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claim 23 is rejected under 35 U.S.C. 103(a) as being unpatentable over Davis *et al.*, as applied to claims 18-22, 25, and 32 above, and further in view of Simmonds *et al.*, (US Patent No. 4,260,873, published on April 7, 1981).

The teachings of Davis *et al.*, have been summarized previously, *supra*.

Davis *et al.*, do not disclose that the inner surfaces of a centrifuge tube are polished by vapor polishing agent as recited in claim 23.

Simmonds does teach to polish the inner surfaces of a centrifuge tube using vapor polishing agent (see columns 1 and 2).

Therefore, it would have been *prima facie* obvious to one having ordinary skill in the art at the time the invention was made to have made an ultracentrifuge tube wherein its inner surface are polished by vapor polishing agent in view of the patents of Davis *et al.*, and Simmonds. One having ordinary skill in the art would have been motivated to do so because vapor polishing would remove oxidized plastic, dissolve uncovered plastic in a centrifuge tube, and make a

Art Unit: 1634

smooth inner surface for the centrifuge tube (see Simmonds *et al.*, column 1, lines 14-28). One having ordinary skill in the art at the time the invention was made would have a reasonable expectation of success to make an ultracentrifuge tube wherein its inner surface are polished by vapor polishing agent.

6. Claim 24 is rejected under 35 U.S.C. 103(a) as being unpatentable over Davis *et al.*, as applied to claims 18-22, 25, and 32 above, and further in view of Saunders *et al.*, (US Patent No. 5,550,060, published on August 27, 1996).

The teachings of Davis *et al.*, have been summarized previously, *supra*.

Davis *et al.*, do not disclose a centrifuge tube whose inner surfaces are coated with an adhering polymer as recited in claim 24.

Saunders *et al.*, do teach to coat the inner surfaces of a centrifuge tube with an adhering polymer (see columns 11 and 12).

Therefore, it would have been *prima facie* obvious to one having ordinary skill in the art at the time the invention was made to have made an ultracentrifuge tube wherein the inner surfaces of the centrifuge tube are coated with an adhering polymer in view of the patents of Davis *et al.*, and Saunders *et al.*. One having ordinary skill in the art would have been motivated to do so because, comparing with a centrifuge tube without an inner surface coating, the use of a centrifuge tube having an inner surface coating (ie., an adhering polymer) would improve cell separation result (see Saunders *et al.*, second paragraph in column 6 and claim 1 in column 16). One having ordinary skill in the art at the time the invention was made would have a reasonable expectation of success to coat the inner surfaces of a centrifuge tube with an adhering polymer.

7. Claim 30 is rejected under 35 U.S.C. 103(a) as being unpatentable over Davis *et al.*, as applied to claims 18-22, 25, and 32 above, and further in view of Finney *et al.*, (US Patent No.4,358,425, published on November 9, 1982).

The teachings of Davis *et al.*, have been summarized previously, *supra*.

Davis *et al.*, do not disclose a centrifuge tube made by polycarbonate as recited in claim 30.

Finney *et al.*, teach a centrifuge tube made by polycarbonate or polysulfone (see column 2, last paragraph).

Therefore, it would have been *prima facie* obvious to one having ordinary skill in the art at the time the invention was made to have made a centrifuge tube using polycarbonate in view of the patents of Davis *et al.*, and Finney *et al.*. One having ordinary skill in the art would have been motivated to do so because a centrifuge tube made by polycarbonate would provide a relatively thick walled, rigid, transparent tube that can be autoclaved (see Finney *et al.*, column 2, last paragraph). Furthermore, it is a routine practice for one having ordinary skill in the art to make a centrifuge tubes using a plastic material such as polycarbonate since Finney *et al.*, has taught a centrifuge made by polycarbonate. One having ordinary skill in the art at the time the invention was made would have a reasonable expectation of success to make a centrifuge tubes using polycarbonate.

*Conclusion*

8. This is a RCE of applicant's earlier Application No. 10/050,848. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

9. No claim is allowed.

10. Papers related to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Group 1600 via the PTO Fax Center. The faxing of such papers must conform with the notices published in the Official Gazette, 1096 OG 30 (November 15, 1988), 1156 OG 61 (November 16, 1993), and 1157 OG 94 (December 28, 1993)(See 37 CAR § 1.6(d)). The CM Fax Center number is (571)273-8300.

Art Unit: 1634

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Frank Lu, Ph.D., whose telephone number is (571)272-0746.

The examiner can normally be reached on Monday-Friday from 9 A.M. to 5 P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, W. Gary Jones, can be reached on (571)272-0745.

Any inquiry of a general nature or relating to the status of this application should be directed to the Chemical Matrix receptionist whose telephone number is (703) 308-0196.
